New manuscript received by Editorial Office (PJOES-00332-2022-01) 3 Yahoo Mail/Inbox

Polish Journal of Environmental Studies <kontakt@editorialssystem.com>
To: Indra Suharman Mon, 7 Mar 2022 at 16:25

Dear Dr. Indra Suharman,

Thank you for your manuscript: Distribution of Fish Species In Relation To Water Quality Conditions In Bengawan Solo River, Central Java, Indonesia.
The following number has been assigned to it: PJOES-00332-2022-01.

The manuscript will be checked by Editors and then sent to the Reviewers.
You will be informed by email about any further decisions on this article.

Thank you for submitting your work to our journal.

With kind regards,

Professor Hanna Radecka
Editor – in – Chief
Polish Journal of Environmental Studies

PJOES-00332-2022-01
Distribution of Fish Species In Relation To Water Quality Conditions In Bengawan Solo River, Central Java, Indonesia

Dear Dr. Indra Suharman,

I would like to thank you for sending the manuscript entitled: Distribution of Fish Species In Relation To Water Quality Conditions In Bengawan Solo River, Central Java, Indonesia but, references in above manuscript are insufficient. I would like to ask you for extending the scientific discussion with up-to-data references (approximately 70% of the references should be published not later than 8 years ago) and submit manuscript again.

Thank you very much for selecting "Polish Journal of Environmental Studies".

Distribution of Fish Species In Relation To Water Quality Conditions In Bengawan Solo River, Central Java, Indonesia

Dear Dr. Indra Suharman,

I am pleased to inform you that your manuscript, entitled: Distribution of Fish Species In Relation To Water Quality Conditions In Bengawan Solo River, Central Java, Indonesia, might be accepted for publication in our journal, pending changes suggested by reviewers (see below).

Please revise your manuscript strictly according to the attached Reviewers' comments as well as Editor's remarks. Your manuscript won't be taken into consideration without the revisions made according to the recommendations.

Please, check all Editor's remarks when revising your manuscript:

- R e f e r e n c e s should be indicated in the text by consecutive numbers and the full references should be listed in the same order at the end of the article according to Journal way
- In references all authors name must be included
- E-mail address of Corresponding Author must be provided
- Manuscript should be divided into the sections: Abstract, Keywords, Introduction, Material and Methods (could be omitted in Reviews), Results and Discussion, Conclusions, Acknowledgements, References

Review 1:
Review of PJOES 0484-2022-01: Distribution of Fish Species In Relation To Water Quality Conditions In Bengawan Solo River, Central Java, Indonesia

This manuscript describes the water quality analysis during the rainy and dry season of 2021 in Bengawan Solo River, Indonesia. The fish catch data is quite interesting and relevant. There are some questions regarding material and methods that have to be resolved before this manuscript can be considered fit for publication.

Abstract
Many of the scientific names in this section are not in italics.

Material and Methods
Figure 1 is low resolution figure. Unacceptable for a scientific paper and lacks standard geographic identifiers. This figure has to be improved. I wonder why authors did not include data on BOD or COD. Nitrogen data is also lacking. Certainly, DO data is important to somehow correlate "potential polluters" with fish presence/absence. Phosphorous (and better yet orthophosphates) are also good indicators of trophic status. I wonder about the use of some ecological indicators like diversity index also as indicators of good quality index for these fish species. I wonder whether or not with the data presented here the authors can calculate some species diversity index that would enrich the work and conclusions of this fine contribution.

Results
Information on the number of replicates in Table 2 and 3 is lacking.

Dear Dr. Dorota Radecka:

Thank you very much for your mail and giving the comments and suggestions on our manuscript (PJOES-00484-2022-01). The comments and suggestions are valuable and very helpful for revising and improving our manuscript. In response to your comments and suggestions, I would like to inform you that we have made revisions and added the suggested content to the manuscript according to the reviewer's comments as well as Editor's remarks (attached file). I hope that our manuscript will be considered and accepted for publication in Polish Journal of Environmental Studies.

Thank you once again for your kind attention and cooperation and I look forward to hearing from you as soon as possible.

Best regards,

INDRA SUHARMA, S.Pi., M.Sc., Ph.D

TABLE OF ANSWERING OF REVIEWER'S COMMENTS
Manuscript PJOES-00484-2022-01

No	Reviewer's comments	Answers
1	Abstract Many of the scientific names in this section are not in italics	We have made revisions
2	Material and Methods - Figure 1 is low resolution figure - I wonder why authors did not include data on BOD or COD - Nitrogen data is also lacking	We have improved the figure with high quality I see big fishery problems in the Bengawan Solo river is the frequent mass fish deaths. Although BOD and COD are important parameters in the aquatic environments, they will not directly cause mass fish death Nitrogen is an indicator of organic matter pollution, but the availability of nitrogen in the air is also quite large enough to enter the water by diffusion, so the author prefers phosphorous as an indicator of pollution, because phosphorous is a limiting factor in nature
	- Lenticity (LX) data is important to somehow correlate "potential polluters" with fish presence/absence	Yes, a significant decrease in LXJ due to waste pollution is the main cause of mass fish deaths
	- Phosphorous (and better yet orthophosphates) are also good indicators of trophic state	Yes, phosphorous is a limiting factor pollution in nature, so the presence of phosphorous in the river is an indication of an anthropogenic instance
	- I wonder about the use of some ecological indicators	The diversity index is a good indicator to assess water quality
